ARTEM YAROSHENKO

LEAD C# / .NET | AI / LLM | RAG | ANGULAR | REACT | AZURE

| LinkedIn | Website | artem.yaroshenko0513@gmail.com |

Lead Full-Stack Engineer with 8+ years of experience building software solutions for clients across the US and Europe. Specialized in C#/.NET, with additional experience in Python, Java, Angular, React, Azure, AI/LLM, RAG, CI/CD, and microservices architecture. Microsoft Certified: Azure Solutions Architect Expert. Experienced in building enterprise applications for logistics, finance, SaaS, and workforce management.

CERTIFICATIONS

Microsoft Certified: Azure Solutions Architect Expert (AZ-305) | View Link
Microsoft Certified: Azure Administrator Associate (AZ-104) | View Link
Microsoft Certified: Azure Fundamentals (AZ-900) | View Link

SKILLS

Backend: C#, Python, Java, .NET, ASP.NET Core, FastAPI, Flask, Spring Boot, Hibernate, Entity Framework Core, Dapper, GraphQL, RESTful APIs, OAuth 2.0, IdentityServer4, Microservices Architecture, Distributed Systems, Event-Driven Architecture, Kafka, RabbitMQ, MassTransit, Azure Service Bus, SignalR, WebSockets, MediatR/CQRS, Hangfire.

Frontend: Angular 19, AngularJS, React, RxJS, Kendo UI, TypeScript, JavaScript, HTML5, CSS3, Bootstrap.

Cloud & DevOps: Azure, Azure Functions, Azure Durable Functions, Serverless Architecture, Azure Event Hub, Azure Synapse, Docker, Docker Compose, Helm, Kubernetes, Terraform, Pulumi, GitHub Actions, Azure DevOps, CI/CD Pipelines, Application Insights, Azure Monitor.
Databases: PostgreSQL, MSSQL, MySQL, Cosmos DB, Redis.

AI & Development Tools: RAG, Azure OpenAI, Azure AI Search, Vector Search, Embeddings, Semantic Search, LLM Integration, Microsoft Agent Framework, Claude Code, Codex, GitHub Copilot, Cursor, AI-Assisted Automation, Visual Studio, VS Code, Rider.

PROFESSIONAL EXPERIENCE

Lead Fullstack .NET/Angular (EPAM Systems – United States Client, US)
May 2024 - Present
Project: Logistics system for tracking trucks and other vehicles, automating road tax calculations, and optimizing delivery routes across the US.

- Designed the solution architecture and selected technologies for the logistics platform.
- Documented and version-controlled architecture decisions and diagrams in a dedicated GitHub repository.
- Developed .NET microservices on Azure with PostgreSQL-backed data storage.
- Designed and built a financial system for processing payments.
- Developed Angular applications for vehicle tracking, road tax calculations, and route planning, integrating them with .NET microservices.
- Built a Python/FastAPI RAG assistant with Azure OpenAI and Azure AI Search to analyze delivery reports and help managers find and aggregate delivery data.
- Established AI-assisted delivery workflows for the team using Mastra, including task aggregation, prioritization, and progress tracking.
- Established AI/LLM-driven development workflows: coding, code review, and testing.
- Mentored engineers through design discussions, implementation reviews, and knowledge sharing.

Senior Fullstack .NET/React (Reenbit – European Client, EU)
Apr 2022 - May 2024
Project: Cloud-based booking and scheduling platform for offices, cafes, and parking spaces across Europe, supporting real-time reservations and synchronization with Google Calendar and Microsoft Outlook services.

- Implemented serverless booking workflows using Azure Functions and Durable Functions.
- Designed multi-tenant data isolation for office, parking, and workspace booking services.
- Integrated Google Calendar API, Microsoft Outlook API, Redis caching, and background processing workflows.
- Designed asynchronous communication between microservices using Azure Service Bus.
- Implemented a MassTransit saga to roll back bookings after conflicts or service failures and send follow-up notifications.
- Configured CI/CD pipelines with GitHub Actions, Docker, and Kubernetes to automate testing and deployments; deployment optimizations contributed to ~20% lower infrastructure costs.
- Collaborated with stakeholders to refine booking features, breaking requirements into actionable development tasks.
- Designed dynamic React applications with real-time calendar updates and SignalR communication.
- Managed containerized workloads using Docker and Kubernetes.
- Led infrastructure provisioning using Terraform and Pulumi
- Implemented OAuth 2.0, JWT, and IdentityServer4 authentication for RESTful APIs.

Fullstack .NET/Angular Engineer (SweetSoft INC – European Client, EU)
Jan 2019 - Apr 2022
Project: Business automation platform for a European cleaning services company, supporting employee management, payroll processing, booking workflows, and secure online payments.

- Developed payroll and workforce management modules using .NET Core, Entity Framework Core, MSSQL, and Redis caching to support salary calculation, vacation tracking, overtime, and sick leave processing.
- Implemented an admin application using AngularJS and Kendo UI to support invoicing, tax payments, and employee management workflows.
- Designed and implemented Cosmos DB solutions for scalable distributed data storage.
- Designed GraphQL APIs and background processing workflows using Hangfire.
- Optimized database query execution, reducing response times by ~50% across payroll and operational modules.
- Developed supporting backend services using Python/FastAPI and Java/Spring Boot with Hibernate, integrating them with .NET services through REST APIs and asynchronous messaging.

LANGUAGES
English (B2), Ukrainian (C2), Russian (C2)

EDUCATION
National Technical University "Kharkiv Polytechnic Institute"
Sep 2017 - June 2020
Bachelor's degree - «Computer Engineering and Electronics»

National Technical University "Kharkiv Polytechnic Institute"
Sep 2020 - June 2022
Master’s degree - «Computer Programming, Specific Applications»
