

ARTEM YAROSHENKO

SENIOR C# .NET | AI AUTOMATION | AZURE | ANGULAR

| [LinkedIn](#) | artem.yaroshenko0513@gmail.com | [GitHub](#) | [Website](#) |

Senior .NET Developer with 7+ years of experience delivering cloud-based solutions for clients across the US and Europe. Specialized in **C#, .NET Core, Angular, Azure Cloud**, distributed systems, and microservices architecture. Experienced in building scalable enterprise and cloud-native applications, event-driven systems, and **AI-driven workflow solutions** using Azure Service Bus, Kafka, PostgreSQL, Cosmos DB, Docker, and Kubernetes across logistics, **finance, SaaS**, and **workforce** management domains.

SKILLS

- **Backend:** C#/.NET Core, ASP.NET Core, Entity Framework Core, Dapper, GraphQL, RESTful APIs, OAuth 2.0, IdentityServer4, Microservices Architecture, Distributed Systems, Event-Driven Architecture, Event Streaming, Kafka, RabbitMQ, Azure Service Bus, WebSockets, MediatR/CQRS, Hangfire, OpenAI API, AI-Assisted Automation.
- **Frontend:** Angular 19, TypeScript, JavaScript, HTML5, CSS3, Bootstrap.
- **Cloud & DevOps:** Azure Cloud Services, Azure Functions, Azure Durable Functions, Serverless Architecture, Azure Event Hub, Synapse, Docker, Kubernetes, Terraform, Pulumi, GitHub Actions, Azure DevOps, CI/CD Pipelines, Application Insights, Azure Monitor.
- **Databases:** PostgreSQL, MSSQL, MySQL, Cosmos DB, Redis.

PROFESSIONAL EXPERIENCE

Senior .NET Engineer (Sigma Software - United States Client, US)

May 2024 - Present

Project: Logistics system for tracking trucks and other vehicles, automating road tax calculations, and optimizing delivery routes across the US.

- Developed scalable **cloud-based** applications using **.NET Core, Azure Cloud, microservices** architecture, and distributed systems approach with **PostgreSQL** sharding.
- Secured **RESTful APIs** with **OAuth 2.0, JWT**, and **IdentityServer4**, improving authentication and authorization reliability across enterprise services.
- Implemented **asynchronous event-driven** communication using **Azure Service Bus** and **Kafka** to support reliable and fault-tolerant processing between **microservices**.
- Configured **CI/CD** pipelines with **GitHub Actions, Docker**, and **Kubernetes**, automating **testing, deployments**, and **infrastructure delivery workflows**.
- Integrated **OpenAI API**-based internal tooling and **AI-driven workflow** solutions to improve operational efficiency and engineering productivity.
- Implemented **invoice creation and recalculation functionality** to process delivery, **shipment**, and regional tax-related business operations.

Project: Cloud-based booking and scheduling platform for offices, cafes, and parking spaces across Europe, supporting real-time reservations and synchronization with Google Calendar and Microsoft Outlook services.

- Implemented serverless booking workflows using **Azure Functions** and **Durable Functions**, reducing infrastructure costs by ~20% and improving background processing scalability.
- Designed dynamic **Angular** applications with real-time calendar updates, **WebSocket** communication, and multi-tenant data isolation for enterprise clients.
- Integrated **Google Calendar API**, **Microsoft Outlook API**, **Redis** caching, and background processing workflows to improve synchronization reliability and user experience.
- Configured **Azure DevOps CI/CD** pipelines and **Docker** deployments to support automated delivery and cloud infrastructure operations.
- Worked closely with stakeholders in **Agile/Scrum** environment to refine business requirements and improve scalability of booking workflows.
- Implemented **AI-driven** automation solutions to improve scheduling workflows and operational efficiency across booking processes.

Project: Business automation platform for a European cleaning services company, supporting employee management, payroll processing, booking workflows, and secure online payments.

- Developed payroll and workforce management modules using **.NET Core**, **Entity Framework Core**, **MSSQL**, and **Redis** caching to support salary calculation, vacation tracking, overtime, and sick leave processing.
- Integrated **Stripe API** and secure payment workflows to support automated invoicing, transaction verification, and online service fee processing.
- Implemented **Cosmos DB** and distributed data access solutions to support scalable, geo-distributed storage and high-availability business operations.
- Designed **GraphQL** APIs and background processing workflows using **Hangfire** to improve frontend data retrieval and internal task automation.
- Optimized database query execution and workflows, reducing response times by ~50% across payroll and operational modules.

LANGUAGES

English (B2), Ukrainian (C2), Russian (C2)

EDUCATION

National Technical University "Kharkiv Polytechnic Institute"

Sep 2017 - June 2020

Bachelor's degree - «Computer Engineering and Electronics»

National Technical University "Kharkiv Polytechnic Institute"

Sep 2020 - June 2022

Master of Computer Applications - MCA - "Computer Programming, Specific Applications"
