ARTEM YAROSHENKO

LEAD C# / .NET | AI / LLM | RAG | ANGULAR | REACT | AZURE

| LinkedIn | Website | artem.yaroshenko0513@gmail.com |

Lead .NET Developer with 8+ years of experience building software solutions for clients across the US and Europe. Specialized in C#/.NET, with additional experience in Python, Java, Angular, React, Azure, AI/LLM, RAG, CI/CD, and microservices architecture. Microsoft Certified: Azure Solutions Architect Expert. Experienced in building enterprise applications for logistics, finance, SaaS, and workforce management.

CERTIFICATIONS

Microsoft Certified: Azure Solutions Architect Expert (AZ-305) | View Link

Microsoft Certified: Azure Administrator Associate (AZ-104) | View Link

Microsoft Certified: Azure Fundamentals (AZ-900) | View Link

SKILLS

Backend: C#, Python, Java, .NET, ASP.NET Core, FastAPI, Flask, Spring Boot, Hibernate, Entity Framework Core, Dapper, GraphQL, RESTful APIs, OAuth 2.0, IdentityServer4, Microservices Architecture, Distributed Systems, Event-Driven Architecture, Kafka, RabbitMQ, Azure Service Bus, SignalR, WebSockets, MediatR/CQRS, Hangfire.

Frontend: Angular 19, AngularJS, React, RxJS, Kendo UI, TypeScript, JavaScript, HTML5, CSS3, Bootstrap.

Cloud & DevOps: Azure, Azure Functions, Azure Durable Functions, Serverless Architecture, Azure Event Hub, Azure Synapse, Docker, Docker Compose, Helm, Kubernetes, Terraform, Pulumi, GitHub Actions, Azure DevOps, CI/CD Pipelines, Application Insights, Azure Monitor.

Databases: PostgreSQL, MSSQL, MySQL, Cosmos DB, Redis.

AI & Development Tools: RAG, Azure OpenAI, Azure AI Search, Vector Search, Embeddings, Semantic Search, LLM Integration, Claude Code, Codex, GitHub Copilot, Cursor, AI-Assisted Automation, Visual Studio, VS Code, Rider.

PROFESSIONAL EXPERIENCE

Lead Fullstack .NET/Angular (EPAM Systems – United States Client, US)

May 2024 - Present

Project: Logistics system for tracking trucks and other vehicles, automating road tax calculations, and optimizing delivery routes across the US.

- Developed .NET microservices on Azure using PostgreSQL sharding.
- Developed Angular applications for vehicle tracking, road tax calculations, and route planning, integrating them with .NET microservices.
- Designed asynchronous communication between microservices using Azure Service Bus.
- Designed the solution architecture and selected technologies for the logistics platform.
- Documented and version-controlled architecture decisions and diagrams in a dedicated GitHub repository.
- Established AI-assisted delivery workflows for the team, including task aggregation, prioritization, and progress tracking.
- Mentored engineers through design discussions, implementation reviews, and knowledge sharing.
- Refined features with stakeholders, breaking requirements into actionable development tasks.
- Built UI features with AngularJS and Kendo UI.

- Established AI/LLM-driven development workflows: coding, code review, and testing.
- Developed and maintained backend services using Java, Spring Boot, and Hibernate, implementing REST APIs and integrations with distributed services.

- Designed and implemented RAG-based AI services using Azure OpenAI, Azure AI Search, vector embeddings, and semantic retrieval to provide LLMs with relevant enterprise data and improve response accuracy.
- Developed Python-based AI services and automation tools using FastAPI, integrating LLM APIs, document processing, and RAG pipelines with existing .NET microservices.

Senior Fullstack .NET/React (Reenbit – European Client, EU)
Apr 2022 - May 2024

Project: Cloud-based booking and scheduling platform for offices, cafes, and parking spaces across Europe, supporting real-time reservations and synchronization with Google Calendar and Microsoft Outlook services.

- Implemented serverless booking workflows using Azure Functions and Durable Functions, reducing infrastructure costs by ~20%.
- Designed multi-tenant data isolation for office, parking, and workspace booking services.
- Integrated Google Calendar API, Microsoft Outlook API, Redis caching, and background processing workflows.
- Configured CI/CD pipelines with GitHub Actions, Docker, and Kubernetes, automating testing, deployments, and infrastructure delivery workflows.
- Collaborated with stakeholders to refine business requirements and design booking workflows.
- Designed dynamic React applications with real-time calendar updates and SignalR communication.
- Managed containerized workloads using Docker and Kubernetes.
- Led infrastructure provisioning using Terraform and Pulumi
- Implemented OAuth 2.0, JWT, and IdentityServer4 authentication for RESTful APIs.

Fullstack .NET/Angular Engineer (SweetSoft INC – European Client, EU)
Jan 2019 - Apr 2022

Project: Business automation platform for a European cleaning services company, supporting employee management, payroll processing, booking workflows, and secure online payments.

- Developed payroll and workforce management modules using .NET Core, Entity Framework Core, MSSQL, and Redis caching to support salary calculation, vacation tracking, overtime, and sick leave processing.
- Implemented an admin application using Angular to support invoicing, tax payments, and employee management workflows.
- Designed and implemented Cosmos DB solutions for scalable distributed data storage.
- Designed GraphQL APIs and background processing workflows using Hangfire.
- Optimized database query execution, reducing response times by ~50% across payroll and operational modules.
- Developed supporting backend services using Python/FastAPI and Java/Spring Boot, integrating them with existing .NET services through REST APIs and asynchronous messaging.

LANGUAGES

English (B2), Ukrainian (C2), Russian (C2)

EDUCATION

National Technical University "Kharkiv Polytechnic Institute"
Sep 2017 - June 2020

Bachelor's degree - «Computer Engineering and Electronics»
